

TGToolkit Manual (v1.1)

Rolando Muñoz Aramburú

(rolando.muar@gmail.com)

TGToolkit is a Praat plug-in that helps you manage TextGrid files with ease. It lets you create, edit, inspect, and query your annotations systematically using simple commands.

Commands

View files (TextGridEditor)

This command lets you load annotation and sound files from a folder directly into the TextGridEditor window. You can also use regular expressions to filter which files are displayed.

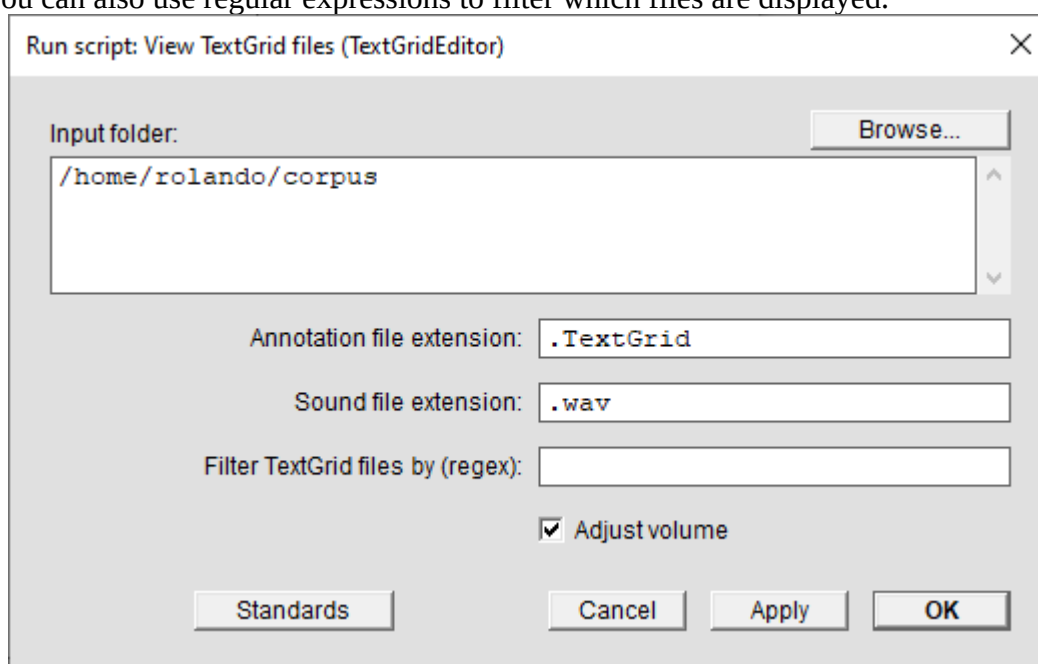

Table 1: Parameters

Input folder	The folder containing both audio and TextGrid files. Each pair of files must have the same name; otherwise, only textgrid files will be displayed.
Annotation file extension	The extension TextGrid files.
Sound file extension	The extension of Sound files. It is case sensitive.
Filter TextGrid files by (regex)	Use regular expression to filter filenames. For example, the expression “p[aeiou]pa” would match SPK_001- <i>papa.TextGrid</i> , SPK_001- <i>pepa.TextGrid</i> , SPK_001- <i>pipa.TextGrid</i>
Adjust volume	Modify the amplitude of the Sound object with the Praat command “Sound: Scale peak...”. If not checked, the sound file will be opened as a LongSound object, saving memory resources.
